OF

MARSH. T. McLENNAN. 9/6.

no more

DATE OF PURCHASE 5/9/22

PLEASE NOTE.

Do not leave newly bound volumes near steam pipes or radiators else the covers will buckle and warp.

It is advisable to keep new volumes under weight for a time. This can best be done by laying another book on them.

SANTA CLARA, CAL.
SANTA CLARA COUNTY.
1915

POPULATION 6500.

PREVAILING WINDS NORTH IN SUMMER, SOUTH IN WINTER.

WATER FACILITIES.—The water supply is derived from the Santa Clara River, which flows into the San Joaquin River, and thence to the San Joaquin Delta. The water is pumped into the city by the Santa Clara Water Works, which is located on the river. The water is then distributed to the city by a system of pipes and mains. The city has a large reservoir, which is used for storage and distribution. The water is also used for irrigation in the surrounding country.

KEY

KEY

- Fire proof construction
- Stone, concrete or concrete block construction
- Iron building
- Brick building with brick or metal cornice
- Frame cornice
- Stone front
- Iron front
- Frame side
- Raised on roof three sides frame
- all
- Brick building with french in mansard roof
- Frame building
- iron coat
- Brick building adjoining stone building with
- Stone building adjoining brick building with
- Side of brick building supported by stalling
- Rail 14' no opening through it
- with opening
- Fire wall 6' inches above roof
- 20'
- Unprotected opening in division wall
- Opening 14' 2" with iron shutters
- Standard door
- Opening with metal glass doors
- Windows with iron shutters
- metal shutters and metal frames
- Window opening in first story
- second and third stories
- fourth
- Stable
- Chimneys
- S.P. Stone pipe
- Other iron chimney 30 ft high with spiral strainer
- C.C. Terra cotta chimney
- C.C. Concrete block chimney
- P.C. Patent chimney
- Buildings in which chimney shafts are built into the structure
- C.C. Concrete block shaft
- A.T. Automatic fire alarm
- O.P. Open
- F.P. Frame enclosed elevator
- Heat from basement in first floor only
- Fire alarm box
- Automatic sprinklers
- Water pipes
- Hydrants
- Fire escape with stand pipe having steamer connection
- Portable stand pipe with steamer connection
- 40' fire escape 110' vertical pipe
- Disposal
- Reference to adjoining street
- Fire engine house, as shown in key map
- Fire alarm box

PROPERTY
OF
P. M. AVERY, MGR., (RELIANCE)

DATE OF PURCHASE Dec. 5th, 1903

PLEASE NOTE.

Do not leave newly bound volumes near steam pipes or radiators else the covers will buckle and warp.

It is advisable to keep new volumes under weight for a time. This can best be done by laying another book on them.

* Indicates only one side of Street shown.

REVISED JANUARY, 1928

SAN JOSE, CAL., VOL. ONE

Grading—North in summer, South in winter.
Grades mostly level. Elevations range from 65' to 125' above sea level.
Public Lights electric.
Streets—About half of the 230 miles of streets paved, part remaining improved. Unimproved streets generally in poor condition during wet weather.

Privately owned. Water supplied by San Jose Water Works from two sources in one service. By gravity from mountain streams on the eastern slope of Santa Cruz mountains, including Los Gatos Creek, supplemented by direct pressure from wells at five pumping stations, with an equalizing reservoir on the gravity line. Two pumping stations are in operation throughout most of the year, and the others as consumption demands require.

gallons, elevation 317', thence by an 18 inch wrought iron water pipe to the Cambrian Reservoir, located $5\frac{1}{2}$ miles S. W. of City Hall, capacity 12,000,000 gallons, elevation 239'. It is used as a distributing reservoir for the mountain supply and acts as an equalizer for the pumped supply. Two 18" mains lead to the distribution system.

PUMP SYSTEM: Main pumping station, located Santa Clara Street near Delma Avenue (Volume furnishes about 30% of the water used, and is open stretch throughout the year. Six wells from 500' to 120' are in disuse. Four wells are equipped with electric and Kewanee pumps. Two wells are operated by an air compressor. Water is received from the top pump wells deliver this line into a 61,200 gallon concrete suction reservoir. Wells deliver 1,200 to 2,200 gpm. This line is connected to the former by a short length of 16" pipe, thence by four Byron Jackson 24" stage centrifugal high lift pumps, capacity 1,440,000 gallons per 24 hours, driven by 75 H.P. motors and 220 K.V.A. gas engines. The latter are driven by 2-200 K.V.A. gas engines each driven by 300 H.P. gas engine.

Seventh Street Station Plant No. 2 on Nor. Seventh Street near E. Santa Clara (Vol. 1, Sheet 1), operates about 6 months of year. Four 12' wells 357 to 1335 deep. Three Galena and one Kimball deep well pumps fill a 2,000,000 gallons concrete storage reservoir. Capacity of plant, 6,000,000 gallons each per 24 hours. Water level about 55' below ground. Thence by 2 Cast. 2 stage centrifugal high lift pumps, one of 2,000,740 gallons per 24 hours driven by a 100 H. P. motor and the other of 1,870,000 gallons driven by a 75 H. P. motor and discharge through separate 10" connections into distributing system.

Cottage Grove Station No. 3 (Vol. 1, Sheet 100), center 18 miles Ave. and Cottage Grove Ave. Planned average four months in summer during hours of high consumption. Two wells 16" and 20" in diameter and 472' and 748' deep, two Byron Jackson deep pumps, capacity 1,580,000 gallons per 24 hours discharge into a 42,000 gallon wood water reservoir tank. Two Byron Jackson high lift pumps, one of 2,800,000 gallons per 24 hours, driven by a 100 H.P. motor and the other of 1,100,000 gallons capacity, driven by a 75 H.P. motor, discharge into a 36" main of the distributing system.

8 auto combination hose and pumpers. 1 auto chemical, 2 auto hose and chemicals. 2 auto hose and water tanks. Radio equipped autos driven by chief, assistant chiefs, fire marshal and fire prevention men.

Fire Alarm.—Gamewell system, 143 boxes.
Fire Limits.—Shown on Key Map by heavy red and green lines.

DISTRICT 2.—Green line district. Street fronts may be constructed of any non-combustible material, but side and rear walls must be brick, concrete or stone, or these combined with iron.

FIRE-RESISTIVE ROOFING ORDINANCE.
Ordinance prohibits use of shingle roofs within Fire Limits (both districts).

SAN JOSE DATE MAR 1915

KEY

Fire proof construction	Rail 14" or opening through it with openings	Slope	Steam boiler
Stone masonry or concrete block construction	Fire wall 8" thick above roof	Chimney	3" Steam pipe
Brick building	Fire wall 8" thick above roof	Terra cotta chimney	4" Non Standard cast chimney
Brick building with brick or metal cornice	Fire wall 8" thick above roof	C.E.C. Conc. block chimney	7" Patent chimney
frame cornice	Fire wall 8" thick above roof	Cast iron chimney 50 ft high with spire arrester	(All buildings on which chimney stands are not shown have standard chimneys)
stone front	Fire wall 8" thick above roof	Closed elevator shaft	Automatic fire alarm
iron front	Fire wall 8" thick above roof	Open	T.M. Independent electric plant
frame side	Fire wall 8" thick above roof	Frame enclosed elevator	Water pipes
House on roof, three sides frame	Fire wall 8" thick above roof	Hoist from basement to first floor only	Single hydrant
all	Fire wall 8" thick above roof	Fire alarm box	Double
Brick building with french or mansard roof	Fire wall 8" thick above roof	Automatic sprinklers	
frame building	Fire wall 8" thick above roof	Fire escape with stand pipe having steamer connection	
iron clad	Fire wall 8" thick above roof	Outside stand pipe with steamer connection	
Brick building adjoining stone building with brick party wall	Fire wall 8" thick above roof	Fire escape	
Stone building adjoining brick building with side of brick building supported by scaffolding	Fire wall 8" thick above roof	Fire pump	
	Fire wall 8" thick above roof	Vertical pipe	
	Fire wall 8" thick above roof	Elevation	
	Fire wall 8" thick above roof	Fire engine house, as shown on key map	
	Fire wall 8" thick above roof	Fire alarm box

POPULATION 6500
PREVAILING WINDS: NORTH IN SUMMER, SOUTH IN WINTER

WATER FACILITIES: The water supply for Santa Clara is derived from the Santa Clara River, which flows into the San Joaquin River. The water is pumped into the city by the Santa Clara Water Works, which is located on the river. The water is then distributed to the city by a system of pipes and mains. The city also has a number of public wells, which are used for domestic purposes. The water is of good quality and is abundant.

SANBORN MAP COMPANY

HOME OFFICE: PELHAM, N. Y. • BRANCH OFFICES: NEW YORK • CHICAGO • SAN FRANCISCO

SPECIAL MEMO

To Local Agency Subscribers:

We are delighted to number you among the many nationwide local agency subscribers to Sanborn Maps.

At the same time, we feel a definite responsibility in advising you as to their use. Properly utilized, they can be "worth their weight in gold" to the progressive local agency.

"Loss ratios" are no longer the exclusive concern of the insurance companies. Proper underwriting on the local level is becoming more and more essential to the growth and prosperity of an agency. For this reason alone, Sanborn Maps are vital. But they can also be utilized for achieving maximum production and most effectively serving your clientele.

For your guidance, here are some of the ways in which you can use these maps profitably:

1. **Checking Construction**—Factors to consider include construction, frame, fire-proof and non-combustible, brick, brick veneered, stone, water mains, fire hydrants, etc., whenever complicated risks are involved.
2. **Spotting Exposures**—Look for exposures adjacent to, across the street, in the rear, or on alleys leading from the risk that may affect the net retention of the line.
3. **Insurance-to-Value**—Scaling the size of the building from the Sanborn Map, converting to square feet, and multiplying by the local current replacement cost for that type of construction can lead to increased limits from clients and "eye-opening" sales to prospects.
4. **New Productions**—Showing a tracing of a business prospect's own building from a Sanborn Map has vivid "impact." Many agents turn this the "most effective" sales approach possible.
5. **Counter Uses**—Reference to the map in the presence of a prospect or insured has a marked psychological effect. It enables an agent to speak authoritatively in regard to the risk at hand.
6. **Field Inspections**—Tracing from a map conserve time—enabling an agent to make many more inspections and devote more time to new business production.
7. **O. L. & T. Rates**—Sanborn Maps are a quick source of measurements of the frontages of buildings.

Please feel free to contact us for any additional information you may require.

Form No. 8-35

When ordering Duplicate Binders or Hinging Strips refer to

STYLE W.R.S. 200

NOTE

Keep new or recently corrected volumes away from steam pipes, radiators, etc., to prevent warping, or buckling.

We recommend keeping them under weight for several days. This can best be done by placing another volume on top.

PLEASE NOTE.

Do not leave newly bound volumes near steam pipes or radiators else the covers will buckle and warp.

It is advisable to keep new volumes under weight for a time. This can best be done by laying another book on them.

REVISÉD JANUARY, 1928

SAN JOSE, CAL., VOL. ONE

Grading Winds—North in summer, South in winter.
Grades nearly level. Elevations range from 65' to 125' above sea level.
Public Lights electric.
Streets—About half of the 230 miles of streets paved, part of remaining improved. Unimproved streets generally in poor condition during wet weather.

Privately owned. Water supplied by San Jose Water Works from two sources in one service. By gravity from mountain streams on the eastern slope of Santa Cruz mountains, including Los Gatos Creek, supplemented by direct pressure from wells at five pumping stations, with an equalizing reservoir on the gravity line. Two pumping stations are in operation throughout most of the year, and the others as consumption demands require.

MOUNTAIN SUPPLY. This source furnishes about 44% of the water consumed. There are 4 impounding reservoirs, combined capacity 270,000,000 gallons at elevations ranging from 1400 to 1500' and 12 to 13 miles S. W. of San Jose on Los Gatos Creek near its tributaries. From the Williams and Howell reservoirs the water descends along the creek beds to Jones Reservoir, a reinforced concrete diversion dam, elevation about 575', from which a flume of wood, concrete, and wrought iron, leads to the Tridale Reservoir, elevation 550', which is the final distributor for the mountain supply. This system also supplies the towns of Los Gatos, Saratoga and vicinity. A single 27 inch line extends from Tridale Reservoir to the Seven Miles Reservoir, capacity 5,000,000

gallons, elevation 312', thence by an 18 inch wrought iron water pipe to the Cambrian Reservoir, located 5 1/2 miles S. W. of City Hall, capacity 17,000,000 gallons, elevation 239'. It is used as a distributing reservoir for the mountain supply and acts as an equalizer for the pumped supply. Two 18" mains lead to the distributing system.

PUMP SUPPLY: Main pumping station, local Santa Clara Street near Delmas Avenue (Volume 1) furnishes about 26% of the water used, and is open almost throughout the year. Six wells from 500' to 120' to 20" in diameter. Four wells are equipped with electrically operated pumps, and two have had electrically operated by an air compressor. Water levels ground level. The four pumping wells deliver their wells directly into a 61,230 gallon concrete storage tank. This tank is connected to a 100,000 gallon steel expansion and contraction reservoir which is connected to the former by a short length of 16" pipe, thence by four Byron Jackson 2 stage centrifugal high lift pumps, capacity 1,440,000 gallons each per 24 hours, driven by 750-hp. electric motors. Reservoir has capacity of 2-250,000 gallons, generated by four 300-hp. gas engines.

Seventeenth Street Station Plant No. 2 on Nor. Seventh Street near E. Santa Clara (Vol. I, Sheet 17), operates about 8 months a year. Four 12" wells 35' to 1335' deep. Three Cation and one Kimball deep well pumps fill a 220,000 gallons capacity suction, reservoir. Suction of pumps 6,600,000 gallons each per 24 hours. Water level about 55' below ground. Thence by 2 Cation 2 stage centrifugal high lift pumps, one of 2,000,740 gallons per 24 hours driven by a 100 H. P. motor and the other of 1,870,000 gallons driven by a 75 H. P. motor and discharge through separate 10" connections into distributing system.

Buena Vista Plant No. 3 on Buena Vista Ave. (Vol. 2, Sheets 196 & 237), furnishes 16% of water used. Four 16" wells from 185' to 510' deep, 3 Byron Jackson and 1 Kimball deep well pumps, discharge into a 65,000 gallon concrete suction reservoir. Water level about 80' below ground level, thence by 2 Byron Jackson deep

REPORT NO LONGER
DIRECTED. SEE GENERAL
EX BOOK.

Cottage Grove Station No. 3 (Vol. 1, Sheet 300) (Owner: Potomac Area and Cottage Grove Area). Plant operated four months in summer during hours of high consumption. Two wells 16" and 22" in diameter and 422' and 748' deep, two Byron Jackson deep well pumps, capacity 1,580,000 gallons per 24 hours discharge into a 42,000 gallon wood stave section tank. Two Byron Jackson high lift pumps, one of 2,300,000 gallons per 24 hours, driven by a 105 H.P. motor and the other of 1,000,000 gallons capacity, driven by a 75 H.P. motor, discharge into a 16" main of the distributing

The rate of capacity of the various units of the system is 30,000,000 gallons per 24 hours. The actual available daily supply is about 18,000,000 gallons. Average daily consumption is 5,700,000 gallons.

6" to 10" fire mains in business section connected to duplicate 16" main extending from main pumping plant supply fire hydrants and are used exclusively for fire purposes. 530 single and double hydrants. About 100 miles of 3, 4, 5, 6, 7, 8, 10, 12, 14, 16, and 18 inch cast iron, wrought iron and steel riveted water pipes. The oldest mains in the system were laid about 1820.

Pressure ranges from 50 to 70 lbs., with an average of 60 lbs., occasionally drops to 40 lbs.

platoon system. 83 fully paid men. 1 chief, 2 assistant chiefs, 1 hydrant inspector, 1 fire prevention man, 1 fire marshal, 1 vacation man and 67 apparatus men. 11 stations. 6 engine companies and 6 chemical companies.

8 auto combination hose and pumpers. 1 auto chemical, 1 auto hose and chemicals. 2 auto hose and water tanks. Radio equipped autos driven by chief, assistant chiefs, fire marshall and fire-communication men.

Fire Alarm.—Gamewell system, 143 boxes.

DISTRICT 2.—Green line district. Street fronts may be constructed of any non-combustible material, but side and rear walls must be brick, concrete or stone, or these combined with iron.

Ordinance prohibits use of shingle roofs within Fire Limit (both districts).

- Brick or Stone Construction
- Frame Construction
- Equipped with Auto Sprinklers
- Fire Department Houses
- Figures in Buildings denote story heights
- Figures at Street denote widths

KEY

- Fire proof construction
- Stone, concrete or concrete block construction
- Iron building
- Brick building with brick or metal cornice
- frame cornice
- stone front
- iron front
- frame side
- those on roof, three sides frame
- all
- Brick building with french or mansard roof
- Frame building
- iron clad
- Brick building adjoining stone building with brick party wall
- Stone building adjoining brick building with wall of brick building supported by studding

- Roof 14' or opening through it
- with openings
- Fire wall 6 inches above roof
- 10
- 24
- Unprotected opening in division wall
- Opening 14' 2" with iron door
- standard steel vault door
- unclad door
- Openings with wired glass doors
- Windows with iron shutters
- Wired glass windows with wooden sash & wooden frames
- metal sash & metal frames
- Window opening in first story
- second
- and third stories
- fourth

- Staircase
- Chimneys
- 14. Terra cotta chimney
- 15. C.C. block chimney
- 16. Iron chimney 30 ft. high, with spark arrester
- 17. Frame enclosed elevator
- 18. Open
- 19. Host from basement to first floor only
- 20. Fire alarm box
- 21. Automatic sprinklers
- 22. Fire escape with stand pipe having steamer connection
- 23. Outside stand pipe with steamer connection
- 24. Fire pump
- 25. Vertical pipe
- 26. Elevation
- 27. Fire engine house as shown on key map
- 28. Fire alarm box
- 29. Steam boiler
- 30. S.F. stove pipe
- 31. New standard cone chimney
- 32. Patent chimney
- 33. Automatic fire alarm
- 34. Independent electric pump
- 35. Water pipes
- 36. Single hydrant
- 37. Double

PLEASE NOTE.

Do not leave newly bound volumes near steam pipes or radiators else the covers will buckle and warp.

It is advisable to keep new volumes under weight for a time. This can best be done by laying another book on them.

STREETS

* Indicates only one side of Street shown

Streets—About half of the 230 miles of streets paved, part of remaining improved. Unimproved streets generally in poor condition during wet weather.

Privately owned. Water supplied by San Jose Water Works from two sources in one service. By gravity from mountain streams on the eastern slope of Santa Cruz mountains, including Los Gatos Creek, supplemented by direct pressure from wells at five pumping stations, with an equalizing reservoir on the gravity line. Two pumping stations are in operation throughout most of the year, and the others at consumption demands require.

of the water consumed. There are 4 impounding reservoirs, combined capacity 270,000,000 gallons at elevations ranging from 1400 to 1500' and 12 to 15 miles S.W. of San Jose on Los Gatos Creek or its tributaries. From the Williams and Howell reservoirs the water flows along the creek beds to Jones Reservoir, a reinforced concrete diversion dam, elevation about 575', from which a flume of wood, concrete, and wrought iron, leads to the Trifidale Reservoir in Los Gatos, elevation 350', which is the final distributor for the mountain supply. This system also supplies the towns of Los Gatos, Saratoga and vicinity. A single 27' inch line extends from Trifidale Reservoir to the Seven Mile Reservoir, capacity 5,600,000

PUMP SUPPLY. Main pumping station, located at Santa Clara Street near Delmas Avenue (Volume 6) furnishes about 20% of the water used, and is in operation throughout the year. Six wells from 80' to 12' to 20' in diameter. Four are equipped with pumps, and two have 1/2 equipment operated by an air compressor. Water is ground level. The four pumping wells deliver the water into a 61,720 gallon concrete suction reservoir. Two wells discharge into a 2,750 gallon concrete reservoir formerly by a short length of 16" pipe; thence by four Byron Jackson 2 stage centrifugal high lift pumps, capacity 1,440,000 gallons each per 24 hours, driven by 75 H.P. motors and discharge into 16" header. The other two—2,200 K.O. gal. and 1,900 gal. headers—discharge into 16" P.F. mainline.

Seventeenth Street Station Plant No. 2 on N. Seventeenth Street near E. Santa Clara (Vol. 1, Sheet 1), operates about 8 months a year. Four 12½ wfls 357" to 1533" deep. Three Caisson and one Kimball deep well pumps. 220,000 gallons concrete section reservoir. Capacity of pumps 6,000,000 gallons each per 24 hours. Caisson pumps 55' below ground. Thence by 2 Caisson 2 stage centrifugal high lift pumps, one of 2,000,740 gallons per 24 hours driven by a 100 H.P. motor and the other of 1,870,000 gallons driven by a 75 H.P. motor and discharge through separate 10" connections into distributing system.

THIS REPORT NO LONGER
CORRECTED. SEE GENERAL
INDEX BOOK.

note: Pipe is so arranged that the pump may be used as a booster for the gravity supply.

Cottage Grove Station No. 5 [Vol. 1, Sheet 100] (former F. muna Area) and Cottage Grove Area. Plant operated from June to August during hours of high consumption. Two wells 16" and 20" in diameter and 42' and 74' deep, two Byron Jackson deep well pumps, capacity 1,580,000 gallons per 24 hours discharge into a 42,000 gallon wood slave section tank. Two Byron Jackson high lift pumps, one of 2,000,000 gallons per 24 hours, driven by a 100 H. P. motor and the other of 1,000,000 gallons capacity, driven by a 25 H. P. motor, discharge into a 16" main of the Distribution

The rate of capacity of the various units of the system is 30,000,000 gallons per 24 hours. The actual available daily supply is about 18,000,000 gallons. Average daily consumption is 5,200,000 gallons.

Pressure ranges from 50 to 70 lbs., with an average of 60 lbs., and occasionally drops to 40 lbs.

2 platoon system. 83 fully paid men. 1 chief, 2 assistant chiefs, 1 hydrant inspector, 1 fire prevention man, 1 fire marshal, 1 vacation man and 67 apparatus men. 11 stations. 6 engine companies and 6 chemical companies.

8 auto combination hose and pumpers. 1 auto chemical, auto hose and chemicals. 2 auto hose and water tanks. Radio equipped autos driven by chief, assistant chiefs, fire marshall and fire prevention men.

Fire Limits.—Shown on Key Map by heavy red and green lines.

DISTRICT 2.—Green line district. Street fronts may be constructed of any non-combustible material, but side and rear walls must be brick, concrete or stone, or these combined with iron.

Ordinance prohibits use of shingle roofs within Fire Limit (both districts).

This is a historical map of a city block in San Salvador, El Salvador. The map is oriented with North at the top. It shows a grid of streets: S. 1st ST., S. 2nd ST., S. 3rd ST., and S. 4th ST. running horizontally, and E. WILLIAM ST. and E. SAN SALVADOR ST. running vertically. The map is divided into several blocks, each containing numerous buildings. Many buildings are labeled with 'APTS' (apartments) and some with lot numbers. The buildings are colored in various shades of yellow, orange, and red. A scale bar at the bottom right indicates distances in feet, with markings for 0, 10, 20, 30, 40, 50, 60, 70, 80, 90, and 100 feet. The map is numbered 92 in the bottom center.
